

BUSINESS INTELLIGENCE SUITE

There's an old saying

“You can't **MANAGE** what you can't **MEASURE**”

Do you find yourself in the position of trying to manage your business and compete against more technologically advanced and well-funded national chains? Is your current Business System more than 5 years old or older? Then friend, you may be “*between a rock and a hard place*”!

*Real-time **Business Intelligence (BI)** is the modern business tool you need to better understand your business and compete more successfully in today's marketplace!*

DMS Systems Corp. has engineered a “suite” of real-time **Business Intelligence Dashboards** to give you and your management team the “up-to-the-minute” information they need to compete against the larger and more high-tech chains in your marketplace, **Right Now!**

Each dashboard will give you profitable insights through easy to understand charts, graphs and tables that will help you better understand your business in far less time than trying to crunch numbers in a spreadsheet or just (I shudder to think), guessing!

DMS' **BUSINESS INTELLIGENCE SUITE** includes the following applications:

Business Team
